

First page

Is only a login. Credentials must be created and modified by the administrator.

Possible fields for database:

- key
- user
- pwd
- firm: is the full client name.

Second page - report

In the report we show graphs, kpi, partial conclusions and general conclusions. Graphs and kpi are html files on iframes. Conclusions probably can be included on string fields in the data base. Each month has its own graphs and conclusions.

Possible fields for database:

- firm_key: relation with the login table
- month
- iframe1: contains the location of the html file that contains first graph/kpi
- conclusion1: string with first partial conclusion
- iframe2
- conclusion2
- iframe_n: the amount of graphs is variable.
- conclusion_n
- finalconclusion: string with final conclusions

EXAMPLE

Welcome ***firm*** (this is the client name)

Select period to generate the report (here can be a drop-down menu with the available months)
